

*Your investment in artificial turf doesn't end with the installation of the field.
Proper maintenance extends the life of the field, improves play,
and preserves the image of your organization and facility.*

The Avant ATA1200 is a combination tool that efficiently cleans and maintains artificial turf at a reasonable cost. The ATA1200 is unique in that it offers multiple functions that can be used together or individually based on the immediate needs of your playing surface. Driven by the light-weight, easy to use Avant articulating loader, the ATA1200 will quickly and efficiently rake, brush and sweep your field.

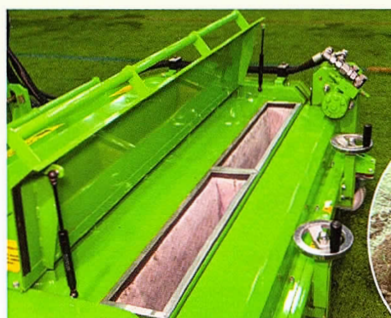

Decompaction Rake Depth	Adjustable 0 - 2 inches
Main Brush Depth	Adjustable 0 - 2 inches
Sieving Chamber	Interchangeable sieve sizes
Rear Finishing Brush	Adjustable from 37 - 65 inches
Hoppers for dust	2
Hoppers for debris	2
Working Width	47"
Total Width	58"

The ATA1200 removes what you don't want in your turf while re-distributing the infill that you do.

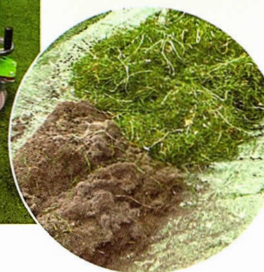

The ATA1200 process:

1. Decompacts infill surface
2. The brush lifts infill, debris and turf fibers
3. Dust and debris are separated from the infill
4. Dust and debris are captured in collection chambers
5. Infill is deposited back into the turf
6. Rotating brush works infill back into the surface
7. Infill is lightly compacted by roller
8. Rear brush lifts turf fibers to create a clean finished look

Common dust, fiber and debris

The athletes who use your turf train hard to perform at the optimum level. Their teams are outfitted in the most advanced, performing-enhancing gear and they are backed by trainers and support staff to keep them healthy and safe. **Does your turf do the same?**

Without proper maintenance and care, artificial surfaces can impair performance, cause injury, and negatively impact games. Provide your teams with optimum playing conditions with the multi-purpose ATA1200 from Avant.

For your outdoor facilities the Avant compact loader includes an enclosed cab option and our turf plow attachment for snow removal. Choose a 6' or 8' attachment to remove snow without displacing infill. The telescopic boom on the loader also lifts for better snow stacking off the playing surface.
